Receiving detail

Canonical receiving_events rows are counted once. Receiver aliases use the same policy as staff rows; source reference and event ID preserve allocation provenance.

RECEIVER	SOURCE	SOURCE REF	SOURCE WAREHOUSE	ITEMS	EVENTS	ITEMS/HOUR	
Matt Totten	scon	743450	Change	584	1	87.3	canonical receiving_events event scon:fed182f27923577bd9f0adb23k
Matt Totten	scon	750399	Change	40	1	87.3	canonical receiving_events event scon:a0971b918725ddad9b58ddda
Helenna Ridder	scon	748450	Change	4,000	1	631.6	canonical receiving_events event scon:626255ebc4f47b6ce0a09c59a

Methodology

Hours: persisted `staff_daily_kpis.inferred_hours` is the authoritative denominator. Rates and APH use that same value; these are operational activity hours, not clocked attendance, payroll, or performance determination.

APH: $(\text{Picked} + \text{Packed} + \text{Received} \times 0.25) \div \text{persisted inferred hours}$. Receiving quantities come only from canonical `receiving_events` and are counted once per event; no latest-user proxy or reducer-run total is substituted.

Warehouse normalization and fallback: only QLD/NSW/VIC are rendered. Explicit source values take precedence; WMS/Change/unrecognized values use the approved employee mapping. Unknown names and unapproved warehouse assignments remain in QA.

QA, coverage and reconciliation

Reconciliation status: PASS

Canonical source totals: Picked 7,981 · Packed 7,981 · Received 4,624 · Receiving events 3

Staff-row totals: Picked 7,981 · Packed 7,981 · Received 4,624

Excluded/unmatched volume: 0 items across 0 source rows; not folded into site totals.

Canonical source warehouse values: Change (3), WMS (2,460)

Source date range: 2026-08-24 to 2026-08-24

Roster: 30 names from the latest provisional snapshot; roles come from reviewed mapping/reference evidence.

Attribution coverage: 1,721 roster-exact rows, 301 approved alias rows, 441 approved mapping-only provisional rows, 0 unresolved rows.

Warehouse attribution: 0 rows used explicit values; 2,463 used approved employee fallback.

Hours/rates: persisted `staff_daily_kpis.inferred_hours` when present; canonical first-to-last observed activity span for approved mapping-only rows is authoritative for all displayed rates and APH; no alternate gap calculation is compared.

Unknown/unmatched names and volumes: None

Use: directional operational reporting, not attendance or HR evidence.

Aggregated exceptions

KIND	SOURCE NAME	SOURCE WAREHOUSE	ROWS	VOLUME	REASON
None					

Generated from canonical SQLite normalized tables: `order_activity`, `receiving_events`, and persisted `staff_daily_kpis` hours.
