

Phase 1 — AI Betting Prediction Engine

Plan prepared for Danny & Loi · May 27, 2026

What's Already Built

 **Data Pipeline**

7 SCRAPERS LIVE

DOMAIN	SCRAPER	WHAT IT PULLS	AUTH
 HK Racing	HKJC	Race cards, 27 fields per horse, body weights, breeding	None
 AU Tips	GoBet	Expert selections, stakes, analysis text	None
 AU Harness	harness.org	Fields, drivers, mobile starts	BABS
 AU Greyhounds	TheDogs	Box draws, Av 1SEC, TRK/DIST	BABS
 NBA	nba_api	Boxscores, player stats, team stats	None
 Football	Football-Data	EPL results + Pinnacle/Bet365 odds	None
 NRL	Champion Data	Player stats, team stats (93 games, 3,535 players)	None

All data piped into unified SQLite database (betting.db) · Daily cron accumulation · Upsert semantics (safe to re-run)

 **Knowledge Base**

 **Matched Betting Module**

Racing wiki pages	10 pages (110 KB)	AU bookmakers	35 tracked
Sports betting pages	12 pages	Total bonus value	\$13,355
Trading wiki pages	7 pages	Est. profit	\$10,006
Raw source articles	68 Pinnacle + 20 Betfair	Execution phases	Prime → Smash → Cleanup
Racing source catalog	63 sources catalogued		

What's Missing

Nothing actually analyses the data. The legacy scorer just weighs tipster opinions against each other. The scrapers are filling the database every day, but no code reads it and produces rated selections.

Phase 1 builds the analysis layer that turns raw data into betting decisions.

Phase 1 — What Gets Built

1. 🐎 Racing Prediction Engine

MODULE	WHAT IT DOES	INPUT	OUTPUT
Speed figures	Standardised time ratings per runner	Times, weights, distances	Speed rating

Form ratings	Career performance analysis	Form lines, class, margins	Form rating
Class handicapper	Class rise/drop weighting	Race grades, prize money	Class adjustment
Track/distance fit	Venue + distance suitability	Historical results	Suitability score
Barrier model	Draw bias by track/distance	Barriers + results	Barrier adjustment
Weight analysis	Body weight change tracking	Declared weight vs last run	Fitness signal
Jockey/trainer	Strike rates, combo bonuses	Jockey, trainer names	Connection bonus

Combined → **Master Rating** per horse → Value detection vs odds → Win/Place selections

2. 🏀 NBA Prediction Engine

MODULE	WHAT IT DOES
Player projections	PTS/REB/AST per player from rolling averages + matchups
Team ratings	Off/Def rating, pace, Four Factors analysis
SGM builder	Correlated Same Game Multi construction (props + margin + total)
Poisson props	Poisson-distributed player prop modeling

3. 🏉 NRL Prediction Engine

MODULE	WHAT IT DOES
Try scorer model	Position × form × matchup → try probability per player
Margin model	Team ratings + venue + Origin period adjustment
SGM builder	Try scorer correlation + margin + total
Player props	Run metres, tackles, fantasy point projections

4. 💰 Staking Engine

MODULE	WHAT IT DOES
Edge calculation	Our rating vs market odds = edge % per bet
Kelly staking	Fractional Kelly — upgraded from legacy quarter-Kelly
Bankroll tracker	Dynamic bankroll across all codes
Portfolio allocation	Split capital across racing/NBA/NRL based on edge quality

5. 📦 Output Layer

MODULE	WHAT IT DOES
HTML cards	Auto-generated betting cards (like Origin SGM but automated)
GitHub Pages	Auto-publish to daztech-ai.github.io
Discord delivery	Push daily picks directly to Danny
Jarvis ledger	Auto-log every bet for results tracking & accuracy monitoring

Architecture

Build Priority

#	MODULE	RATIONALE
---	--------	-----------

1	Racing win/place	HKJC data is richest (27 fields). Happy Valley + Sha Tin weekly. Biggest edge opportunity.
2	NRL engine	Origin I proved the data works. Automate what we did manually.
3	NBA engine	Playoffs now. Pipeline fix + model build.
4	Staking engine	Needed before real money deployment.
5	Output layer	Auto-publish picks. GitHub Pages auth required.
6	World Cup	June 11 deadline. Football model. BallDontLie API scraper needed.

What Phase 1 Is NOT

- **Not** a live betting bot → Phase 2
- **Not** arbitrage betting → Loi's domain
- **Not** trifecta modeling → Backlogged per Danny
- **Not** matched betting automation → Loi's lane, Daz assists on request

Proof of Concept

Origin I SGM — Built & Delivered Today

LEG	SELECTION	CONFIDENCE	DATA SOURCE
1	QLD +4.5	HIGH	93 NRL games, player form
2	Tabuai-Fidow anytime try	HIGH	7T + 7A in 2026 season
3	To'o anytime try	HIGH	7T in last 5 Origin games
4	Walker anytime try	VALUE	5T as halfback (elite rate)

Est. odds \$18-25 · \$50 → \$900-1,250 · Full analysis PDF delivered to Danny & Discord ·
6 total picks logged in Jarvis ledger

Phase 1 delivers: rated selections with staking recommendations across 3 codes, daily.

The Origin card was a manual preview of what this becomes fully
automated.
